DETAILED ACTION

Allowable Subject Matter

1. Claims 2-4, and 8-13 are allowed.

The prior art neither teaches nor fairly suggests a CMOS image sensor comprising a pixel sensor, a data I/O line, a double sampling circuit, and an output circuit for outputting data related to a voltage level of the output terminal, wherein the double sampling circuit samples the signal data before sampling the reset data, as claimed in Claim 1, wherein the double sampling circuit comprises a first transistor driving the data I/O line to a first reference voltage in response to a read command, and outputting a value related to the signal data, a coupling capacitor coupling a storing node with the data I/O line, a second transistor driving the storing node to a second reference voltage in response to a control signal, and a third transistor transferring the voltage of the storing node to the output terminal in response to a second selecting signal.
